

Nureva® App

The Nureva App makes it simple to set up, optimize and customize your audio systems. Use our full-featured iOS, Android™ or web-based version with the HDL310 and HDL410 systems to access advanced tools and settings. A desktop version (with the essentials) is available for the HDL200 system.

Device setup

Use an iPhone® or iPad® device to quickly measure room acoustics and get a score to inform your microphone and speaker bar placements. Then equip your room quickly with an intuitive device setup walk-through that offers important installation tips, including mounting requirements. You can also easily update your device with a single click, without having to put it on your network, so you always have the latest features.

Advanced audio settings

Tailor your audio systems by using simple settings and controls that help you create the ideal in-room and remote audio experience. For example, you can fine-tune microphone gain by applying recommended Teams or Zoom settings or adjusting the audio processing. Or improve the audio experience for those in the room by strengthening speaker output or turning on Adaptive Voice Amplification.

Automated camera switching

Make camera switching in your larger rooms easy and effective, thanks to sound location data and AI-enabled voice detection. In the Nureva App, you can access a coverage map showing voice pickup in a room and then create multiple zones to automate camera switching with any brand of USB or HDMI camera.

LAN access

Access the app over your local area network (LAN). It's simple to use an Ethernet cable to connect directly or set a static IP address. There's no need to download any software or sign up for an account.

Features

- **Acoustic check** lets you use an iPhone or iPad to test potential microphone and speaker bar locations before hanging your system on the wall.
- **Teams and Zoom audio settings** make it simple to apply recommended settings for Teams Rooms and Zoom Rooms.
- **AI-enabled voice detection** improves camera switching by better differentiating between voices and background sounds.
- **Dynamic boost** creates stronger speaker output for noisier spaces and improves the intelligibility of a variety of audio sources.
- **Adaptive Voice Amplification** helps in-room participants hear clearly without diminishing the remote audio experience. Audience mute is included.
- **Coverage map with camera zones** visualizes sound events in real time and provides zone settings for automated camera switching.
- **Integration settings** make it simple to configure local integrations for cameras and control systems.
- **Troubleshooting tools** include the ability to check connectivity, download logs or contact support right from the Nureva App.

We are Nureva

We believe that amazing things happen when people come together. They imagine greater possibilities, create better solutions and find greater joy in how they work and learn. It's why we create and support truly original solutions that make it astonishingly easy for our customers to connect and collaborate no matter where they are.
